

HR Analytics Dashboard Summary

Project Overview

Developed an interactive Tableau dashboard to analyze employee attrition, workforce demographics, job satisfaction, and workforce trends. The dashboard supports HR leaders in monitoring key workforce metrics and identifying areas requiring retention strategies.

Business Objective

Analyze employee attrition patterns, workforce demographics, department performance, and job satisfaction to enable data-driven HR decisions and improve employee retention.

KPI	Value
Total Employees	1,470
Attrition Count	237
Active Employees	1,233
Attrition Rate	16.12%
Average Age	37 Years

Verified Key Insights

- Research & Development records the highest employee attrition (133 employees), followed by Sales (92) and Human Resources (12).
- Overall attrition rate is 16.12%, with 237 employees leaving out of a workforce of 1,470.

- Male employees account for 150 attrition cases compared to 87 female employees.
- Life Sciences (89) and Medical (63) are the education fields contributing the highest attrition counts.
- The workforce is primarily concentrated in the 25–34 age group (554 employees), followed by 35–44 (505 employees).
- Average employee age is 37 years.
- Job satisfaction metrics across roles help identify opportunities to improve employee engagement and retention.

Business Recommendations

- Prioritize retention initiatives within the Research & Development and Sales departments.
- Improve career progression and engagement programs for early- and mid-career employees.
- Continuously monitor job satisfaction and employee feedback across job roles.
- Use demographic insights for workforce planning and succession management.
- As a future enhancement, integrate predictive attrition modeling to proactively identify employees at risk of leaving.
